

SUPPLEMENTARY FIGURE

Supplementary Figure 1– Representative IHC sections following CRF and SRF showed comparable expression of proteins. A. IHC staining of RF treated SNs with MBP, myelin PLP, CD11b, NEFH, and S100a. Scale bar represents 1 mm. B. The semi-quantitative evaluation of protein marker expression in SNs following RF ablations. CRF, cooled radiofrequency; mm, millimeter; MBP, myelin basic protein; NEFH, neurofilament heavy chain; PLP, proteolipid protein; S100a, Schwann cells; SRF, standard radiofrequency.
